BEng Aerospace Engineering, Swansea University, expected 2028

PROFILE

Second year Aerospace Engineering student at Swansea University, on a 2:1 average after year one, looking for a year in industry placement starting 2027. This summer I spent six weeks on an internship at Thales in Crawley, shadowing engineers on live projects and following how a requirement gets defined, allocated and verified, and what the documentation around it has to look like before anyone signs it off. On the engineering side I have led teams of six through a design build, a costed manufacturing pitch and a data analysis project, and I am most useful when something has gone wrong and needs working back to a root cause. Four years helping run a barbershop part time alongside my studies taught me that most problems on a floor are process problems, and that the people doing the job usually know what is wrong before anyone else does. I am looking for aerospace, defence or manufacturing engineering, anywhere in the UK.

EDUCATION

BEng Aerospace Engineering, Swansea University, Sep 2025 to Present

- Averaged a 2:1 across year one, scoring 70% or above in Engineering Design, Design and Laboratory Classes, and Engineering Skills for Aerospace Engineers.
- Elected Year 1 Subject Representative for Aerospace Engineering, representing the whole first year cohort and acting as the main link between students and academic staff. Gathered issues from students, raised them directly with module leads and fed the outcomes back to the cohort.
- Group Leader, glider design project. Led a team of 6 through the full design cycle in SolidWorks, from concept to flight test, against a brief requiring the aircraft to fly and then land with its payload, an egg, still intact. The aircraft flew, then flipped in strong crosswind on test day and the motor detached. The payload survived and the brief was met. I led the root cause analysis afterwards and traced the failure to a motor mounting hole drilled too shallow, a tolerance error that a dimensional check at assembly would have caught.
- Group Leader, manufacturing business pitch. Led a team of 6 to plan production of 1,000 gliders on a £10,000 investment, covering the unit cost model, marketing strategy and quality optimisation plan. Scored 8 out of 10.
- Led a team of 6 on a data analysis exercise in Excel using Bloodhound land speed record data, working from thrust vector and velocity figures to calculate the braking point needed for a record attempt.
- Year 2 in progress, 2026 to 2027: Aerospace Dynamics and Control, AI and Aerospace Systems, Engineering Design and Simulation, Spacecraft Systems Engineering, Subsonic Aerodynamics and Flight Mechanics, and Research Project Preparation.
- Laboratory work across aerodynamics, structures, fluid mechanics and systems engineering, including wind tunnel testing, material hardness testing and heat pump thermodynamic cycle analysis.
- MATLAB numerical methods and simulation coursework, written up as formal technical reports.
- Member of the Royal Aeronautical Society.

A Levels, Gower College Swansea, Sep 2022 to Jun 2025

- Studied Mathematics, Physics, Economics, Business and the Welsh Baccalaureate.

GCSEs, Pentrehafod School, Swansea, Sep 2017 to Jun 2022

- 15 GCSEs, all at grades A to C, including Mathematics, Science and English.
- Student Council member for five years. Ran charity fundraising events for Cancer Research UK every year, contributed to a school wide uniform reform, and was chosen to deliver a speech on behalf of the school to the Welsh Minister for Education.

ENGINEERING EXPERIENCE

Summer Internship, Thales UK, Crawley, May 2026 to Jul 2026 (6 weeks)

- Shadowed engineers on live projects across a 6 week placement, seeing how engineering workflows run day to day and the documentation standards a project is held to.
- Followed how requirements are defined, allocated and verified across a project lifecycle.
- Gained exposure to MBSE toolchains in use on site, including Capella and DOORS.
- Observed how cross functional teams coordinate across disciplines, and where the handover points between them sit.

WORK EXPERIENCE

Barber and Shop Manager (part time), Figaros / Saptiizz, Swansea, 2021 to Present

- Run daily operations of a three chair shop, including till reconciliation, card payment processing and staff payroll.
- Supervise a team of 3 barbers, setting the rota and holding the standard on quality of work.

- Train new barbers from scratch on cutting technique, checking and correcting their work before it reaches a client.
- Built and kept a repeat client base through consistent service and clear communication.

Waiter Service Manager, Positano, Swansea, Apr 2021 to Nov 2022

- Coordinated two kitchens across a 40 table restaurant serving roughly 120 to 160 covers on a busy service, sequencing starters, mains and desserts so courses left the pass in the right order.
- Directed front of house staff on where each dish went, keeping service moving under sustained pressure.
- Trained new front of house staff and supervised them through high volume services and large events.

VIRTUAL WORK EXPERIENCE

Operations Industrial Engineer Virtual Experience, Siemens Mobility, via Forage, Apr 2026

- Ran time studies on assembly tasks in a high speed rail manufacturing setting and used the numbers to argue for a different line layout.
- The useful lesson was how narrow the evidence needs to be before anyone will move a workstation, and how quickly a small layout change shows up in line output.

Engineering Virtual Experience, British Airways, via Forage, Apr 2026

- Investigated an aircraft defect through to resolution, then forecast material requirements and planned maintenance around it.
- Taught me how a defect turns into a paper trail, and why the record of what was done matters as much to compliance as the repair itself.

Explore Engineering Virtual Experience, GE Aerospace, via Forage, Apr 2026

- Worked through jet engine design tasks, including energy source selection and the effect of compression and bypass ratio on engine efficiency.
- Gave me a working feel for propulsion tradeoffs, where a gain in one figure is almost always paid for somewhere else.

Operations Virtual Experience, Goldman Sachs, via Forage, Apr 2026

- Handled transaction management tasks covering data analysis, process improvement, risk and cross functional work.
- The takeaway was how much operational risk comes from small unchecked details rather than large failures, and how process design is built to catch them.

Robotics and Controls Virtual Experience, Johnson & Johnson MedTech, via Forage, Jun 2026

- Analysed control system performance in surgical robotics, using Python to model system behaviour and interpret the results.
- Showed me how control response is measured against a requirement rather than judged by eye, which is a habit I have carried into coursework.

Engineering for New Energy Virtual Experience, APA Group, via Forage, Jun 2026

- Assessed technical feasibility on energy infrastructure tasks, processing datasets in Python to support design recommendations.
- Good practice at deciding what a dataset can and cannot support before putting a recommendation behind it.

TECHNICAL SKILLS

CAD and modelling: SolidWorks (2 years or more), Onshape
Programming: MATLAB (2 years or more), Simulink, Python (NumPy, SciPy, openpyxl)
Systems engineering tools: Capella, IBM Rhapsody, DOORS, Siemens NX (working familiarity)
Data and productivity: Microsoft Excel, Word, PowerPoint, Outlook (6 years or more)
Engineering: Aerodynamics, structural analysis, fluid mechanics, propulsion systems, systems integration
Methods: Root cause analysis, time studies, process improvement, cost modelling, data analysis in Excel, technical report writing
Strengths: Attention to detail, structured problem solving, team leadership, stakeholder communication, public speaking

INTERESTS

- Hiked and wild camped across Snowdonia over three days this summer, covering the three highest peaks in Wales. Planned the route, the kit and the camps myself.
- Play 7 a side football with a large group of friends every Sunday. Nothing competitive, just two hours a week that I rarely miss.
- Member of Swansea University Tennis Club, training weekly with the team and professional coaches.
- Regular attendee at the Wales National Airshow.
